## FUND MANAGER COMMENTARY

In March 2023, IDR Equity Fund booked flat performance MoM, largely tracking the benchmark performance. Financials was the largest positive contributor while material sector was the largest negative contributor. Last month, Indonesia equity market slightly declined MoM due to the Fed's hawkishness as well as concern on global financial stability due to several bank failures in the US. That said, Indonesia equity market saw IDR 4.1trn net foreign inflows, which majority came in the last one week of the month. While volatility may remain high in the near-term, driven by external risk factors, the potential of sustainable and structural improvement in Indonesian economy with potentially rising GDP/capita could become positive tailwind for Indonesian equity asset class in the long run, as such any correction in near term could present a good opportunity to accumulate.
