FUND MANAGER COMMENTARY

The managers still believe that higher rates would have their intended effect on growth and fundamentals. Central banks are likely to hold rates high for longer, given the enduring tightness of labour markets and stubborn underlying inflation. The managers remain cautious on credit and equities. High yield bond spreads continue to price in a benign outcome, while the maturity wall suggests impending downgrades and rating migrations. The managers prefer high quality duration assets, focusing on government duration. Against this backdrop, in defensive assets, the managers added to longer dated US Treasuries as US yields moved back towards the top of their trading range. They also added to 10-year UK government bonds as attractive yields coupled with a weaker economic outlook and the potential for disinflation offers a good entry point, with cuts not priced in until 2025. They added to the Japanese yen exposure given the Bank of Japan's yield curve control policy adjustments. Within yield assets, the managers used the latest policy stimulus announcements in China to take profits from Asian high yield bonds. They also took profits from emerging market local currency debt given their resilience and rotated the proceeds to US high yield bonds. Within equities, the managers reduced the exposure to Europe on account of a decline in margins, weak ex-bank earnings and the possibility of subdued bank earnings. The managers also reduced the allocation to emerging market equity income and China real estate due to their lower conviction on China's recovery. They sold their European equity hedge and re-opened US hedges given ongoing inflation concerns.
