FUND MANAGER COMMENTARY

In July 2025, IDR Equity Fund booked a positive performance of +1.22% mom, below the benchmark performance. Domestic equity market had a rebound in July, in line with the global market gain, even as foreign investors continued to remain as net sellers of the market as they recorded another sizable net outflow of Rp8.3tn, as also can be seen in the price declines of liquid, quality blue-chips. As such, the market gain was driven more by retail investors participation, which has been growing exponentially this year, as they represent c. 44% of total market value YTD (vs. only 32% last year), as can be seen in the highly speculative stock rallies that dominated the market gains in Jun-Jul. Sectoral-wise, largest negative contributors were Financials and Consumer Discretionary, while largest positive contributor were Materials. Following this rebound and with rather disappointing earnings results showings in 2Q25, equity market volatility may remain high. That said, we continue to believe that the potential of sustainable and structural improvement in Indonesian economy with potentially rising GDP/capita could become a positive tailwind for long-term Indonesian equity market return, as such any corrections could offer a good market entry opportunity with an attractive risk-reward in the long-run.
