## FUND MANAGER COMMENTARY

In September 2025, IDR Equity Fund booked a positive performance of +1.29% mom, slightly below the benchmark performance. Local equity market gain was driven by materials, energy and industrial sectors particularly the conglomerates-backed stocks, while financials sector which is still the biggest constituent of the market continued to drag. Foreign investors turned net sellers, recording a net outflow of IDR3.8tn for the month, a reversal from the net foreign inflow in previous month. That said, we continue to believe that the potential of sustainable and structural improvement in Indonesian economy with potentially rising GDP/capita could become a positive tailwind for long-term Indonesian equity market return, as such we continue to stay invested and that any corrections could offer a good market entry opportunity with an attractive risk-reward in the long-run. Potential catalysts could come from acceleration in government spending, Rupiah stability and/or appreciation and continued gold price strength.
