FUND MANAGER COMMENTARY

In January 2025, IDR Equity Fund booked negative performance of -1.56% mom, in line with the benchmark performance. While global equity market was generally positive, Indonesia equity market was mixed with IDX80 & LQ45 index booked negative return while JCI was slightly positive. Financials sector was positive contributor, while Materials were the largest negative contributor in Indonesia equity market. Foreign investors continued their selling spree in January 2025 as they recorded another net outflow amounting to -Rp3.7tn. Going forward, upon recent clarity on new US tariff implementation and the retaliatory tariffs by the other countries, equity market volatility may remain high. That said, we continue to believe that the potential of sustainable and structural improvement in Indonesian economy with potentially rising GDP/capita could become a positive tailwind for long-term Indonesian equity market return, as such current market weakness and the attractive market valuation (-2SD below mean) could offer a good market entry opportunity with an attractive risk-reward.
